

QrMyCar for Society

Empowering Societies Through Innovative
Society Management Solutions

Introduction

One dashboard. Total control.
QrMyCar digitizes access management
for gated communities – making them
safer, faster, and more organized.

Problem Statement

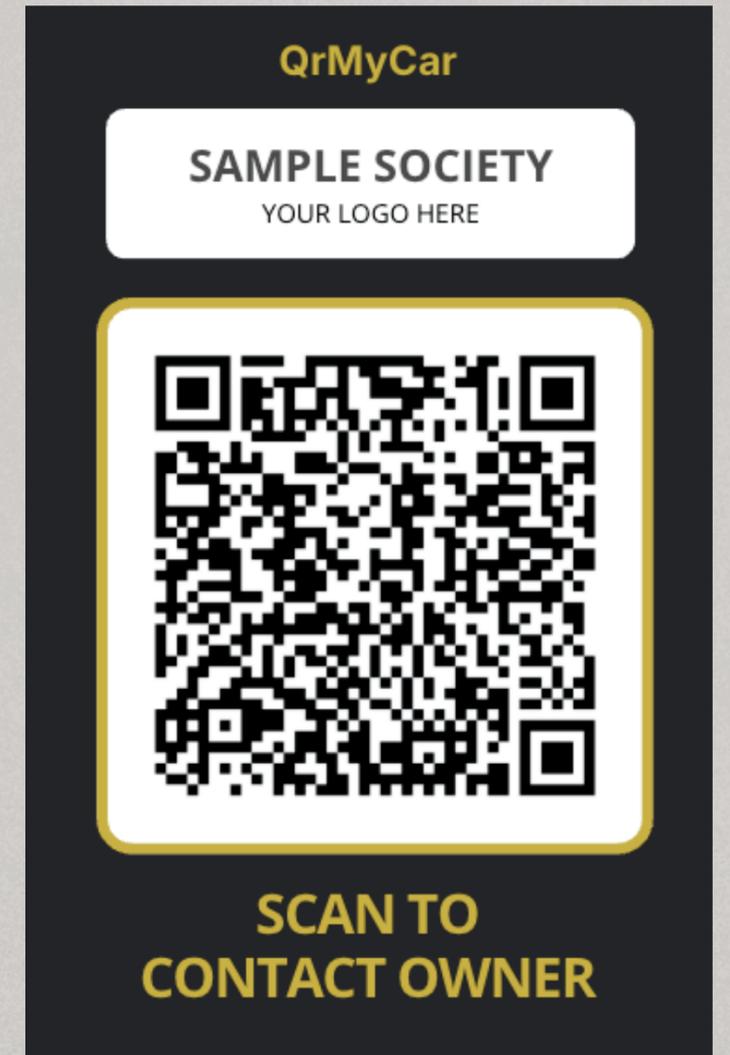

- ↘ Gated communities still depend on paper registers for visitor and vehicle entry, leading to slow processes, errors, and poor record management.
- ↘ Security staff cannot instantly verify active, expired, or blacklisted vehicles, increasing the risk of unauthorized entry and misuse of static stickers.
- ↘ Traditional systems offer no digital tracking of guard actions or gate operations, making it difficult to investigate security incidents.
- ↘ Managing data for societies of all sizes without a centralized digital system results in delays, heavy paperwork, and poor scalability.

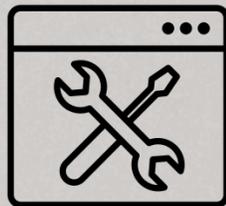

Our Solution

- ↘ 100% Digital Gate Management
- ↘ Real-Time Validation & Security
- ↘ Seamless QR Integration
- ↘ Enhanced Guard Accountability
- ↘ Data-Driven Oversight

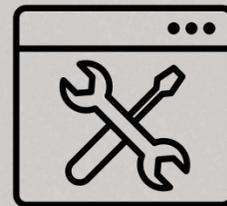

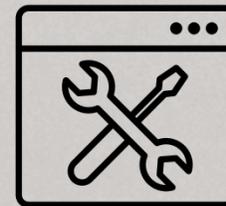

Product Features

Society Management

**Resident & Vehicle
Management**

Visitor Management

**Security Guard &
Gate Operations**

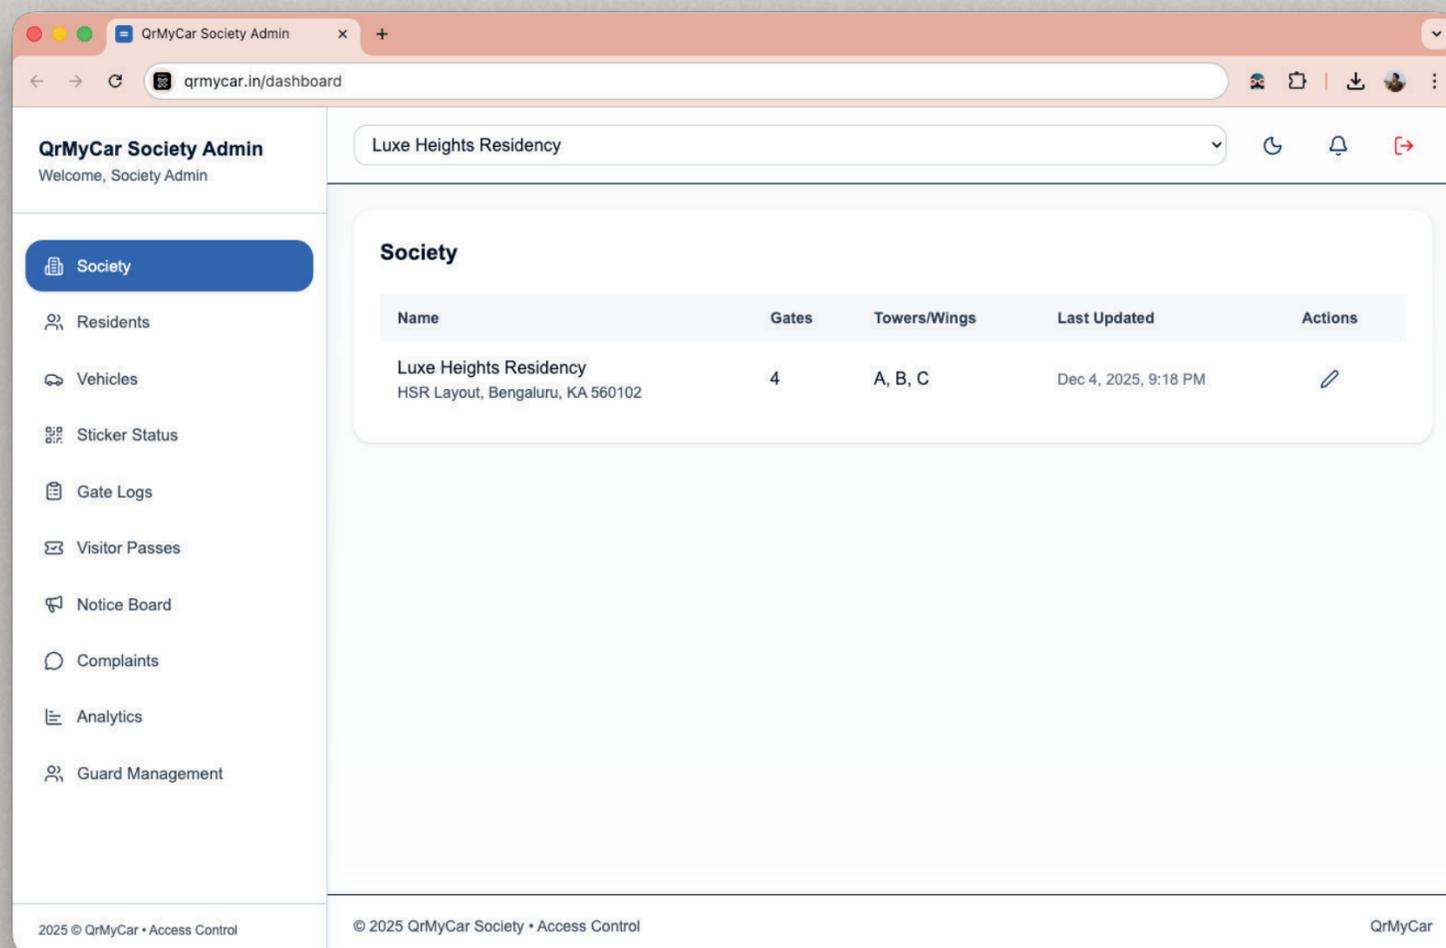

Analytics & Reports

And more features like Security Guard Management, Complaint Management and Digital Notice Board....

Society Management

- Centralized dashboard to manage societies, towers, wings, gates, and addresses
- Quick digital onboarding with configurable gate rules and visitor approval policies
- Role-based admin access to prevent unauthorized data changes
